1. INTENDED USE

BD Oncomark™ Anti-Kappa FITC/ Anti-Lambda PE/CD19 PerCP-Cy™5.5* is intended for in vitro flow cytometric immunophenotyping of the presence and extent of clonal expansion in B-lymphoproliferative disorders. Abnormal kappa/lambda ratios or intensities are strong indicators of clonal processes.1,2 Anti-Kappa/Anti-Lambda/CD19 assays are used in the diagnosis of hematologic disorders.1,2

2. COMPOSITION

Anti-Kappa, clone TB28-2, is derived from the hybridization of mouse P3-X63-Ag8.653 myeloma cells with cells from CB6 (BC57b x BALB/c) mice immunized with human IgG-κ myeloma protein.

Anti-Lambda, clone 1-155-2, is derived from the hybridization of mouse P3-X63-Ag8.653 myeloma cells with cells from BALB/cJ mice immunized with human IgA1-λ myeloma protein.

CD19, clone SJ25C1,3 is derived from the hybridization of mouse Sp2/O myeloma cells with spleen cells from BALB/c mice immunized with NALM-1 + NALM-16 cells.

* Cy™ is a trademark of GE Healthcare. This product is subject to proprietary rights of GE Healthcare and Carnegie Mellon University, and is made and sold under license from GE Healthcare. This product is licensed for sale only for in vitro diagnostics. It is not licensed for any other use. If you require any additional license to use this product and do not have one, return this material, unopened, to BD Biosciences, 2350 Qume Drive, San Jose, CA 95131, and any money paid for the material will be refunded.
Anti-Kappa and CD19 are each composed of mouse IgG1 heavy chains and kappa light chains. Anti-Lambda is composed of mouse IgG1 heavy chains and lambda light chains.

This reagent is supplied as a combination of Anti-Kappa FITC, Anti-Lambda PE, and CD19 PerCP-Cy5.5 in 1 mL of phosphate-buffered saline (PBS) containing bovine serum albumin (BSA) and 0.1% sodium azide.

Antibody purity is as follows.

- FITC, PE, PerCP-Cy5.5: ≤20% free fluorophore at bottling, as measured by size-exclusion chromatography (SEC)

3. STORAGE AND HANDLING

The antibody reagent is stable until the expiration date shown on the label when stored at 2°C–8°C. Do not use after the expiration date. Do not freeze the reagent or expose it to direct light during storage or incubation with cells. Keep the outside of the reagent vial dry.

Do not use the reagent if you observe any change in appearance. Precipitation or discoloration indicates instability or deterioration.

4. REAGENTS OR MATERIALS REQUIRED BUT NOT PROVIDED

- Falcon® disposable 12 x 75-mm polystyrene test tubes or equivalent
- Micropipettor with tips
- Vortex mixer
- BD FACS™ lysis solution (10X) (Catalog No. 349202). For dilution instructions and warnings, refer to the instructions for use (IFU).
- Centrifuge
- BD CellWASH™ (Catalog No. 349524) or a wash buffer of PBS with 0.1% sodium azide
- BD CellFIX™ (Catalog No. 340181) or 1% paraformaldehyde solution in PBS with 0.1% sodium azide. Store at 2°C–8°C in amber glass for up to 1 week.
- Properly equipped cytometer

Flow cytometers must have laser excitation set at 488 nm and must be equipped to detect light scatter and the appropriate fluorescence, and have the appropriate analysis software installed for data acquisition and analysis. Refer to your instrument user’s guide for instructions.

5. SPECIMEN(S)

BD Oncomark Anti-Kappa FITC/Anti-Lambda PE/CD19 PerCP-Cy5.5 can be used for immunophenotyping by flow cytometry with peripheral blood and bone marrow aspirates collected in BD Vacutainer® EDTA tubes. Each type of specimen can have different storage conditions and limitations that should be considered prior to collection and analysis.4,5

WARNING All biological specimens and materials coming in contact with them are considered biohazards. Handle as if capable of transmitting infection6,7 and dispose of with proper precautions in
accordance with federal, state, and local regulations. Never pipette by mouth. Wear suitable protective clothing, eyewear, and gloves.

6. PROCEDURE
Viability of samples should be assessed and a cutoff value established. A cutoff value of at least 80% viable cells has been suggested. To avoid serum interference when using these reagents, it is necessary to pre-wash the sample using at least 25 volumes excess 1X PBS with 0.1% sodium azide (48 mL of 1X PBS with sodium azide per 2 mL of whole blood to be washed). Mix well. Pellet cells by centrifugation and resuspend in 1X PBS with 0.1% sodium azide to the original volume.

1. Add 20 µL of BD Oncomark Anti-Kappa/Anti-Lambda/CD19 reagent to 100 µL of whole blood or prefiltered bone marrow in a 12 x 75-mm tube.
2. Vortex gently and incubate for 15 to 20 minutes in the dark at room temperature (20°C–25°C).
3. Add 2 mL of 1X BD FACS lysing solution.
4. Vortex gently and incubate for 10 minutes in the dark at room temperature.
5. Centrifuge at 300 g for 5 minutes. Remove the supernatant.
6. Add 2 to 3 mL of BD CellWASH solution (or wash buffer) and centrifuge at 200g for 5 minutes. Remove the supernatant.
7. Add 0.5 mL of BD CellFIX solution or 1% paraformaldehyde and mix thoroughly. Store at 2°C–8°C until analyzed.

Stained samples should be analyzed within 24 hours of staining.

Flow Cytometric Analysis
1. Set up the instrument as recommended by the manufacturer. Run a control sample daily from a normal adult subject or a commercially available whole blood control to optimize instrument settings and as a quality control check of the system.
2. Vortex the cells thoroughly at low speed to reduce aggregation before running them on the flow cytometer.
3. Run sample on flow cytometer.
4. Acquire and analyze list-mode data using appropriate software.
5. Draw a gate around the population of interest in an FSC vs SSC dot plot (Figure 1).

![Figure 1](image.png)

6. Perform analysis of the antigen of interest based on the sample negative population.
7. Draw quadrants and calculate statistics (Figure 2, Figure 3, and Figure 4).
7. PERFORMANCE CHARACTERISTICS

Specificity

Anti-Kappa is specific for kappa light chains of human immunoglobulins.\textsuperscript{9}

Anti-Lambda is specific for lambda light chains of human immunoglobulins.\textsuperscript{9}

CD19 (SJ25C1) recognizes a 90-kilodalton (kDa) antigen that is present on human B lymphocytes.\textsuperscript{3,10}

Antigen Distribution

Immunoglobulins bearing kappa light chains are present on approximately 60\% of normal B lymphocytes and on Ig\(\kappa^+\) neoplastic cells.\textsuperscript{11-17}

Immunoglobulins bearing lambda light chains are present on approximately 40\% of normal B lymphocytes and on Ig\(\lambda^+\) neoplastic cells.\textsuperscript{11-17}

The CD19 antigen is present on approximately 7\% to 23\% of human peripheral blood lymphocytes\textsuperscript{18} and on splenocytes.\textsuperscript{19} The CD19 antigen is present on human B lymphocytes at most stages of maturation.\textsuperscript{3,20} CD19 does not react with resting or activated T lymphocytes, granulocytes, or monocytes.\textsuperscript{3,20}

8. LIMITATIONS

Use of therapeutic monoclonal antibodies in patient treatment can interfere with recognition of target antigens by this reagent. This should be considered when analyzing samples from patients treated in this fashion. BD Biosciences has not characterized the effect of the presence of therapeutic antibodies on the performance of this reagent.
Use of this reagent combination for diagnostic evaluation of hematologic disorders should be performed in the context of a thorough immunophenotypic analysis including other relevant markers.

Procedures using BD Oncomark reagents must adhere to the instructions for use for the specific instrument, software, and quality control procedures used by your laboratory.

Reagent performance data was collected typically with EDTA-treated specimens. Reagent performance can be affected by the use of other anticoagulants.

Samples with large numbers of nonviable cells can give erroneous results due to selective loss of populations and to increased nonspecific binding of antibodies to nonviable cells.

**WARRANTY**

Unless otherwise indicated in any applicable BD general conditions of sale for non-US customers, the following warranty applies to the purchase of these products.

The products sold hereunder are warranted only to conform to the quantity and contents stated on the label or in the product labeling at the time of delivery to the customer. BD disclaims hereby all other warranties, expressed or implied, including warranties of merchantability and fitness for any particular purpose and noninfringement. BD’s sole liability is limited to either replacement of the products or refund of the purchase price. BD is not liable for property damage or any incidental or consequential damages, including personal injury, or economic loss, caused by the product.
