Monoclonal Antibodies Detecting Human Antigens

CD103 (Ber-ACT8)

RESEARCH APPLICATIONS

Research applications include studies of:

- T lymphocytes in inflammatory lung diseases
- Hairy cell leukemia

DESCRIPTION

Specificity

The CD103 antibody recognizes the αE subunit of integrin αEβ7, an integrin also known as the human mucosal lymphocyte (HML) antigen but not α4, another member of the β7 integrin subfamily. Integrin αEβ7 is a trimeric protein complex of three components, 105 kilodaltons (kDa) (β7), 150 kDa, and 25 kDa. The CD103 antibody recognizes an epitope localized on the 150-kDa chain.

Antigen distribution

The CD103 antigen is preferentially expressed on human intestinal intraepithelial lymphocytes (IELs). The CD103 antibody also reacts with most T cells present in the oral and bronchial mucosa. Most cases of hairy cell leukemia were found to be CD103+. The majority of the CD103+ cells found in fresh blood, splenic cells, and in vitro–activated T cells co-expressed CD8. A subset of cytolytic T lymphocytes (CTLs) with phenotype of CD8+CD103+ was found to be responsible for the destruction of graft epithelium and, therefore, organ allograft rejection.

Clone

The CD103 antibody, clone Ber-ACT8, is derived from the fusion of mouse myeloma cells with spleen cells isolated from BALB/c mice immunized with the HTLV-1–positive T-cell line, MAPS.

Composition

The CD103 antibody is composed of mouse IgG1 heavy chains and kappa light chains.

Product configuration

The following are supplied in buffer containing a stabilizer and a preservative.

a. Volume required to stain 10⁶ cells.

PROCEDURE

Visit our website (bdbiosciences.com) or contact your local BD representative for the lyse/wash protocol for direct immunofluorescence.

For Research Use Only. Not for use in diagnostic or therapeutic procedures.
**REPRESENTATIVE DATA**

Flow cytometric analysis was performed on peripheral blood with hairy cell leukemia cells stained with the indicated conjugated antibody. Laser excitation was at 488 nm. Representative data analyzed with a BD FACSTM brand flow cytometer is shown in the following plots.

**Figure 1** Representative data analyzed with a BD FACSTM brand flow cytometer

**HANDLING AND STORAGE**

Store vials at 2°C–8°C. Conjugated forms should not be frozen. Protect from exposure to light. Each reagent is stable until the expiration date shown on the bottle label when stored as directed.

**WARNING**

All biological specimens and materials coming in contact with them are considered biohazards. Handle as if capable of transmitting infection13,14 and dispose of with proper precautions in accordance with federal, state, and local regulations. Never pipette by mouth. Wear suitable protective clothing, eyewear, and gloves.

**CHARACTERIZATION**

To ensure consistently high-quality reagents, each lot of antibody is tested for conformance with characteristics of a standard reagent. Representative flow cytometric data is included in this data sheet.

**WARRANTY**

Unless otherwise indicated in any applicable BD general conditions of sale for non-US customers, the following warranty applies to the purchase of these products.

THE PRODUCTS SOLD HEREUNDER ARE WARRANTED ONLY TO CONFORM TO THE QUANTITY AND CONTENTS STATED ON THE LABEL OR IN THE PRODUCT LABELING AT THE TIME OF DELIVERY TO THE CUSTOMER. BD DISCLAIMS HEREBY ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR ANY PARTICULAR PURPOSE AND NONINFRINGEMENT. BD’S SOLE LIABILITY IS LIMITED TO EITHER REPLACEMENT OF THE PRODUCTS OR REFUND OF THE PURCHASE PRICE. BD IS NOT LIABLE FOR PROPERTY DAMAGE OR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES, INCLUDING PERSONAL INJURY, OR ECONOMIC LOSS, CAUSED BY THE PRODUCT.
