Technical Data Sheet

Purified Mouse Anti-Human CD11c for IHC

Product Information

Material Number: 550375
Alternate Name: ITGAX; AlphaX integrin chain; Axb2; Integrin alpha-X; CR4; Leu M5; SLEB6
Size: 1 mL
Concentration: 31.25 µg/ml
Clone: B-ly6
Immunogen: Spleen Cells from Human with Hairy Cell Leukemia
Isotype: Mouse (BALB/c) IgG1, κ
QC Testing: Human
Workshop: IV N012
Storage Buffer: Aqueous buffered solution containing BSA, goat serum, and ≤0.09% sodium azide.

Description

The B-ly6 monoclonal antibody specifically binds to the 150 kDa adhesion glycoprotein CD11c (p150, integrin α chain). CD11c is expressed on dendritic cells, monocytes, macrophages, granulocytes, NK cells and subsets of B and T cells. It associates with CD18 to form the CD11c/CD18 complex that binds fibrinogen and has been reported to be a receptor for iC3b and ICAM-1. Reports indicate that CD11c/CD18 plays a role as an adhesion molecule that mediates cellular binding to ligands expressed on stimulated epithelium and endothelium.

Preparation and Storage

Store undiluted at 4°C.

The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography.

Recommended Assay Procedure:

Immunohistochemistry: The B-ly6 antibody is recommended to test for immunohistochemical staining of acetone-fixed frozen sections. Tissue tested was human spleen and tonsil. The antibody stains granulocytes, monocytes, NK cells and a subset of B- and T-cells. For optimal indirect immunohistochemical staining, the B-ly6 antibody should be titrated (1:10 to 1:50 dilution) and visualized via a three-step staining procedure in combination with polyclonal, biotin conjugated anti-mouse Igs (multiple adsorbed) (Cat. No. 550337) as the secondary antibody and Streptavidin-HRP (Cat. No. 550946) together with the DAB detection system (Cat. No. 550880). The clone B-ly6 is not recommended for formalin-fixed paraffin embedded sections. For more protocol information please visit http://www.bdbiosciences.com/resources/cellbiology/index.jsp

Other applications: The B-ly6 antibody is routinely tested by immunofluorescent staining for flow cytometric analysis and is available in different fluorochrome conjugated formats.

Immunohistochemical staining of CD11c positive cells.

Frozen sections of normal human spleen was stained with Purified Mouse Anti-Human CD11c antibody. Cells positive for CD11c can be identified by the intense brown labeling if their cell membranes. Amplification 20X.
### Product Notices

1. Since applications vary, each investigator should titrate the reagent to obtain optimal results.
2. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing.
3. Sodium azide is a reversible inhibitor of oxidative metabolism; therefore, antibody preparations containing this preservative agent must not be used in cell cultures nor injected into animals. Sodium azide may be removed by washing stained cells or plate-bound antibody or dialyzing soluble antibody in sodium azide-free buffer. Since endotoxin may also affect the results of functional studies, we recommend the NA/LE (No Azide/Low Endotoxin) antibody format, if available, for in vitro and in vivo use.
4. Source of all serum proteins is from USDA inspected abattoirs located in the United States.
5. An isotype control should be used at the same concentration as the antibody of interest.
6. This antibody has been developed for the immunohistochemistry application. However, a routine immunohistochemistry test is not performed on every lot. Researchers are encouraged to titrate the reagent for optimal performance.
