Purified Rat Anti-Mouse Follicular Dendritic Cell

Material Information

- Material Number: 551320
- Size: 1.0 ml
- Clone: FDC-M1
- Isotype: Rat IgG2c, κ
- Reactivity: QC Testing: Mouse
- Storage Buffer: Aqueous buffered solution containing BSA, goat serum, and ≤0.09% sodium azide.

Description

Follicular Dendritic Cells (FDC) form a structural network within the lymphoid follicles and are involved in antigen presentation to B cells for generating an immune response and for the maintenance of immunological memory. FDCs are believed to provide signals to B cells to induce their proliferation. In LCMV mediated immunosuppression there is evidence of T-cell dependent destruction of macrophages and follicular dendritic cells. The FDC-M1 antibody recognizes follicular dendritic cells and their dendritic processes.

Preparation and Storage

The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography. Store undiluted at 4°C.

Application Notes

Recommended Assay Procedure:

**Immunohistochemistry:** The FDC-M1 clone reactive against mouse follicular dendritic cells is tested for immunohistochemical staining of acetone-fixed frozen sections. Tissues tested were mouse spleen, thymus and small intestine. The antibody stains follicular dendritic cells and their processes. For optimal indirect immunohistochemical staining, the FDC-M1 antibody should be titrated (1-10 to 1-50 dilution) and visualized via a three-step staining procedure in combination with polyclonal, biotin conjugated anti-rat Igs (multiple adsorbed) (Cat. No. 559286) as the secondary antibody and streptavidin-HRP (Cat. No. 550946) together with the DAB detection system (Cat. No. 550880). More conveniently, the anti-rat Ig HRP detection kit (Cat. No. 551013) that provides the biotinylated secondary antibody, antibody diluent and the detection system can be used to stain for anti-mouse follicular dendritic cells. A detailed protocol of the immunohistochemical procedure is enclosed. The clone FDC-M1 is not recommended for formalin-fixed paraffin embedded sections.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Not for resale.
Product Notices
1. Since applications vary, each investigator should titrate the reagent to obtain optimal results.
3. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before
discarding to avoid accumulation of potentially explosive deposits in plumbing.
4. Source of all serum proteins is from USDA inspected abattoirs located in the United States.
