Purified Mouse Anti-Human Toll-Like Receptor 4

Product Information

Material Number: 551964
Alternate Name: TLR4, CD284
Size: 0.1 mg
Concentration: 0.5 mg/ml
Clone: HTA125
Immunogen: Human TLR4-transfected Ba/F3 cell line
Isotype: Mouse IgG2a, κ
Reactivity: QC Testing: Human
Storage Buffer: Aqueous buffered solution containing ≤0.09% sodium azide.

Description

The monoclonal antibody HTA125 reacts with the human Toll-like receptor 4 (TLR4). Toll-like receptors (TLR) are type I transmembrane proteins characterized by an extracellular domain containing leucine-rich repeats and a cytoplasmic domain similar to IL-1R family. In human, ten TLR have been identified so far. The TLR family acts as pattern-recognition receptor is the essential component of pathogen recognition and innate immunity. TLR4 has been identified as the receptor for Gram-negative bacterial LPS. TLR4 mRNA has been found in spleen, placenta, ovary, intestine and lung. Using HTA125, TLR4 protein expression has been detected in monocytes, B cells, and T cells in human peripheral blood. Human TLR4 gene has been mapped to chromosome 9q32. The immunogen used to generate HTA125 hybridoma was human TLR4-transfected Ba/F3 cell line.

Preparation and Storage

Store undiluted at 4°C.

The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography.

Application Notes

Application

Flow cytometry Routinely Tested
Blocking Reported

Recommended Assay Procedure:

A multistep staining procedure is recommended to amplify immunofluorescent signals for the flow cytometric analysis of human TLR4 expression:

Step 1: Incubate 10^6 cells with 0.25 - 1.0 µg/test of purified HTA125 antibody at 4°C for at least 15 - 20 minutes. Wash cells two times with staining medium containing sodium azide (e.g., BD Pharmingen™ Stain Buffer, Cat. No. 554656).

Step 2: Incubate the cells with biotinylated anti-mouse Ig (Cat. No. 553999) or biotinylated anti-mouse IgG2a, (Cat. No. 553388) at 4°C for 20 minutes. Wash cells two times.

Step 3: Incubate the cells with ≤0.06 µg of streptavidin-phycoerythrin (Cat. No. 554061) at 4°C for 20 minutes. Wash two times. Resuspend cells in stain buffer and analyze stained cells by flow cytometry using appropriate specificity and compensation controls.

Product Notices
1. Since applications vary, each investigator should titrate the reagent to obtain optimal results.
2. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing.
3. An isotype control should be used at the same concentration as the antibody of interest.
