Technical Data Sheet

Biotin Hamster Anti-Mouse TCR β Chain

Product Information

Material Number: 553169
Size: 0.5 mg
Concentration: 0.5 mg/ml
Clone: H57-597
Immunogen: TCR affinity-purified from mouse T-cell hybridoma DO-11.10
Isotype: Armenian Hamster IgG2, λ1
Reactivity: QC Testing: Mouse
Storage Buffer: Aqueous buffered solution containing protein stabilizer and ≤0.09% sodium azide.

Description

The H57-597 antibody reacts with a common epitope of the β chain of the T-cell Receptor (TCR) complex on αβ TCR-expressing thymocytes and peripheral T lymphocytes and NK1.1+ thymocytes and NK-T cells of all mouse strains tested. It does not react with γδTCR-bearing T cells. In the fetal and adult thymus, the TCR β chain may form homodimers or pair with the pre-TCR a chain on the surface of immature thymocytes before expression of the TCR a chain. Plate-bound or soluble H57-597 antibody activates αβTCR-bearing T cells, and plate-bound mAb can induce apoptotic death.

This antibody is routinely tested by flow cytometric analysis. Other applications were tested at BD Biosciences Pharmingen during antibody development only or reported in the literature.

**αβ TCR expression in spleen and thymus.** BALB/c splenocytes (left panels) were simultaneously stained with PE-conjugated anti-mouse CD4 mAb RM4-5 (Cat. No. 553048/553049), PE-conjugated anti-mouse CD8a mAb S3-8.7 (Cat. No. 553032/553033), and either biotinylated Hamster IgG2, λ isotype control mAb H4/8 (Cat. No. 553963, top left panel) or biotinylated mAb H57-597 (bottom left panel) monoclonal antibodies, followed by Avidin-FITC (Cat. No. 554057). BALB/c thymocytes (right panels) were stained with either biotinylated isotype control (top right panel) or biotinylated mAbs H57-597 (bottom right panel), followed by Avidin-FITC. Flow cytometry was performed on a BD FACScan™ flow cytometry system.

Preparation and Storage

The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography.

The antibody was conjugated with biotin under optimum conditions, and unreacted biotin was removed.

Store undiluted at 4°C and protected from prolonged exposure to light. Do not freeze.

Application Notes

Application

Recommended Assay Procedure:
It has been observed that pre-incubation of thymus cell suspensions at 37°C for 2 to 4 hours prior to staining enhances the ability of anti-CD3e and anti-TCR β chain mAbs to detect the T cell receptor on immature thymocytes.

Product Notices
1. Since applications vary, each investigator should titrate the reagent to obtain optimal results.
2. Please refer to wwwbdbiosciences.com/pharmingen/protocols for technical protocols.
3. Although hamster immunoglobulin isotypes have not been well defined, BD Biosciences Pharmingen has grouped Armenian and Syrian hamster IgG monoclonal antibodies according to their reactivity with a panel of mouse anti-hamster IgG mAbs. A table of the hamster IgG groups, Reactivity of Mouse Anti-Hamster Ig mAbs, may be viewed at http://wwwbdbiosciences.com/pharmingen/hamster_chart_11x17.pdf.
4. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing.
