PE Mouse Anti-Human CD122

Material Number: 554525
Alternate Name: IL2RB; IL-2Rβ; IL-2R subunit beta; IL-2RB; IL15RB; IL-2/15Rb; IL-2R p75
Size: 0.2 mg
Concentration: 0.2 mg/ml
Clone: Mik-β3
Immunogen: Human YTS Cell Line
Isotype: Mouse (BALB/c) IgG1, κ
Reactivity: QC Testing: Human
Workshop: V C046
Storage Buffer: Aqueous buffered solution containing ≤0.09% sodium azide.

Description
The Mik-β3 monoclonal antibody specifically binds to CD122. CD122 is also known as IL-2/15Rβ because it is the shared p75 subunit (IL-12Rβ2/IL-15Rβ) of heteromeric receptors for IL-2 and IL-15. CD122 is a 70-75 kD type I transmembrane glycoprotein expressed on thymocytes, T cells, B cells, NK cells, monocytes, hematopoietic progenitor cells, fetal liver cells and stromal cells. The CD122 plays roles in the activation, differentiation and proliferation of various cell types including T cells, B cells and NK cells.

Preparation and Storage
Store undiluted at 4°C and protected from prolonged exposure to light. Do not freeze.

The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography.

The antibody was conjugated with R-PE under optimum conditions, and unconjugated antibody and free PE were removed.

Application Notes

Application
Flow cytometry Routinely Tested

Recommended Assay Procedure:
This antibody has also been reported to be useful for immunoprecipitation experiments. It has been reported to precipitate from YTS cell lysates a 90,000 kD complex (IL-2 + p75). This antibody has also been reported not to block IL-2 binding to the β chain of the IL-2 receptor. Please note that this application is not routinely tested at BD Biosciences.

Flow cytometric analysis of CD122 expression on human peripheral blood lymphocytes. Whole blood was stained with either PE Mouse Anti-Human CD122 (Cat. No. 554525; solid line histogram) or PE Mouse IgG1 κ Isotype Control (Cat. No. 554680; dashed line histogram). Erythrocytes were lysed with BD Pharm Lyse™ Lysing Buffer (Cat. No. 555899). Fluorescent histograms were derived from gated events with the forward and light-scattering characteristics of viable lymphocytes. Flow cytometry was performed on a BD FACScan™ system.
Product Notices

1. Since applications vary, each investigator should titrate the reagent to obtain optimal results.
2. An isotype control should be used at the same concentration as the antibody of interest.
3. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing.
4. For fluorochrome spectra and suitable instrument settings, please refer to our Multicolor Flow Cytometry web page at wwwbdbiosciencescom/colors.
5. Please refer to wwwbdbiosciencescom/pharmingenprotocols for technical protocols.
