Technical Data Sheet

PE Mouse Anti-Human CD79a

Product Information
Material Number: 555935
Alternate Name: Igα, mb-1
Size: 100 tests
Vol. per Test: 20 µl
Clone: HM47
Isotype: Mouse IgG1, κ
Reactivity: QC Testing: Human
Workshop: QC cB017
Cross Reactivity Confirmed in Development: Mouse
Storage Buffer: Aqueous buffered solution containing BSA and ≤0.09% sodium azide.

Description
Reacts with the cytoplasmic domain of a 47 kDa membrane glycoprotein present on B lymphocytes, also referred to as mb-1. It is expressed on B cells at various stages of differentiation, from pre-B cell stage, probably before expression of cytoplasmic µ chain, to plasma cell stage, in which it is detected only in the cytoplasm. CD79a associates with CD79b to form part of the B-cell receptor complex. It has been suggested that CD79a may play a role in mediating the transport of IgM to the cell surface. This antibody has been found to react on permeabilized A20 cells (mouse B cell line).

Preparation and Storage
The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography. The antibody was conjugated with R-PE under optimum conditions, and unconjugated antibody and free PE were removed.

Application Notes
Application
Intracellular staining (flow cytometry) Routinely Tested

Product Notices

1. This reagent has been pre-diluted for use at the recommended Volume per Test. We typically use 1 X 10^6 cells in a 100-µl experimental sample (a test).

2. Since applications vary, each investigator should titrate the reagent to obtain optimal results.

4. For fluorochrome spectra and suitable instrument settings, please refer to our Fluorochrome Web Page at www.bdbiosciences.com/pharmingen/colors.

5. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing.

6. Source of all serum proteins is from USDA inspected abattoirs located in the United States.
