FITC Rat Anti-Mouse Ly-6D

Product Information

Material Number: 561148
Alternate Name: Lymphocyte antigen 6 complex, locus D; Thb; Thymocyte B-cell antigen; Ly-61
Size: 0.1 mg
Concentration: 0.5 mg/ml
Clone: 49-H4
Immunogen: BALB/c mouse plasmacytoma MOPC-104E
Isotype: Rat (LOU) IgG2c, κ
Reactivity: QC Testing: Mouse
Storage Buffer: Aqueous buffered solution containing protein stabilizer and ≤0.09% sodium azide.

Description

The 49-H4 antibody specifically binds to the ThB antigen (Ly-6D), which is a 15-kDa GPI-anchored protein of the Ly-6 Multigene Family. ThB has been detected on cortical thymocytes, small slg- Thy-1- and slg+ lymphoid cells in the bone marrow, thymic medullary epithelial cells, all epidermal layers (except the stratum corneum), and on peripheral B lymphocytes, but not on peripheral T lymphocytes. It has been noted that there is strain-to-strain variation in the expression of the ThB antigen on splenic B cells, those of strains with the Ly-6.2 haplotype (e.g., AKR, C57BL, DBA/2, SJL, SWR) stain more intensely with anti-ThB reagents than those of Ly-6.1 strains (e.g., A, BALB/c, CBA, C3H/He, NZB), and B cells of hybrids of Ly-6.1 and Ly-6.2 strains stain with intermediate intensity. The proportions of the ThB+ B cells and thymocytes do not differ significantly among strains.

Flow cytometric analysis of Ly-6D expression on BALB/c mouse splenocytes. BALB/c mouse splenocytes were simultaneously stained with FITC Rat Anti-Mouse Ly-6D (Cat. No. 561148, Left Panel) or FITC Rat IgG2c Isotype Control (Cat. No. 560893, Right Panel) and PerCP-Cy™5.5 Anti-Mouse CD3 (Cat. No. 561108) antibodies. A two-color flow cytometric dot plot showing the correlated expression patterns of Ly-6D versus CD3 was derived from gated events with the forward and side light-scatter characteristics of viable splenocytes. Flow cytometry was performed using a BD LSR™ II Flow Cytometer System.

Preparation and Storage

Store undiluted at 4°C and protected from prolonged exposure to light. Do not freeze.

The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography.

The antibody was conjugated with FITC under optimum conditions, and unreacted FITC was removed.

Application Notes

Application
Flow cytometry Routinely Tested

BD Biosciences

## Product Notices

1. Since applications vary, each investigator should titrate the reagent to obtain optimal results.
3. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing.
4. For fluorochrome spectra and suitable instrument settings, please refer to our Multicolor Flow Cytometry web page at www.bdbiosciences.com/colors.
5. An isotype control should be used at the same concentration as the antibody of interest.
6. Cy is a trademark of Amersham Biosciences Limited.
