**Product Information**

**Material Number:** 561313

**Alternate Name:** IgG Fc receptor III; IGFR3; FCG3; FCGR3; FCGRIII; FcγRIII

**Size:** 100 Tests

**Vol. per Test:** 5 µl

**Clone:** B73.1

**Immunogen:** Human NK Cells

**Isootype:** Mouse (BALB/c) IgG1, κ

**Reactivity:** QC Testing: Human

**Workshop:** IV NL402

**Storage Buffer:** Aqueous buffered solution containing BSA and ≤0.09% sodium azide.

**Description**

The B73.1 monoclonal antibody specifically binds to CD16, the 50-70 kDa low affinity receptor for IgG, IgG Fc receptor III (FcγRIII). CD16 is expressed on NK cells, neutrophils, and on a subset of T cells from certain individuals. The B73.1 antibody binds to CD16-positive neutrophils with lower intensity when compared with some other CD16-specific antibodies. A variable number of CD16-positive lymphocytes coexpress either the CD57 antigen or low-density CD8 antigen or both. The B73.1 antibody can block Fc receptor functions mediated by CD16.

**Flow cytometric analysis of CD16 on human peripheral blood lymphocytes.** Human whole blood was stained with the PE Mouse Anti-Human CD16 antibody (Cat. No. 561313; solid line histogram) or with a PE Mouse IgG1, κ Isotype Control (Cat. No. 555749; dashed line histogram). The erythrocytes were lysed with BD PharmLyse™ Lysing Buffer (Cat. No. 555899). The fluorescence histograms were derived from events with the forward and side light-scatter characteristics of viable lymphocytes. Flow cytometry was performed using a BD™ LSR II Flow Cytometer System.

**Preparation and Storage**

Store undiluted at 4°C and protected from prolonged exposure to light. Do not freeze.

The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography.

The antibody was conjugated with R-PE under optimum conditions, and unconjugated antibody and free PE were removed.

**Application Notes**

**Application**

| Flow cytometry | Routinely Tested |

**Recommended Assay Procedure:**

**CAUTION:** B73.1 binding is inhibited by human serum or aggregated IgG. In whole blood preparations, CD16 shows variable reactivity with granulocytes.

**Suggested Companion Products**

Product Notices

1. This reagent has been pre-diluted for use at the recommended Volume per Test. We typically use $1 \times 10^6$ cells in a 100-µl experimental sample (a test).

2. An isotype control should be used at the same concentration as the antibody of interest.

3. Source of all serum proteins is from USDA inspected abattoirs located in the United States.

4. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing.

5. For fluorochrome spectra and suitable instrument settings, please refer to our Multicolor Flow Cytometry web page at www.bdbiosciences.com/colors.

6. Please refer to www.regdocs.bd.com to access safety data sheets (SDS).
