Technical Data Sheet

PE Mouse anti-Human TGF-β1

Product Information

Material Number: 562339
Alternate Name: TGFB1; TGFbeta1; TGF-beta-1; Transforming growth factor, beta 1; CED; LAP
Size: 100 tests
Vol. per Test: 5 µl
Clone: TW4-9E7
Immunogen: Human TGF-β1 Transfected Cell Line
Isotype: Mouse (BALB/c) IgG1, κ
Reactivity: QC Testing: Human cell line
Storage Buffer: Aqueous buffered solution containing BSA and ≤0.09% sodium azide.

Description

The TW4-9E7 monoclonal antibody specifically binds to Human Transforming Growth Factor beta-1 (TGF-β1). TGF-β1 is a potent multifunctional cytokine that positively or negatively regulates numerous processes including development, hematopoiesis, tissue remodeling, wound repair, innate and adaptive immunity as well as cancer and autoimmune diseases. TGF-β1 is formed by the enzymatic cleavage of the TGF-β1 propeptide that is encoded by the TGFB1 gene and comprises of the Latency Associated Peptide (LAP) and TGF-β1. Prior to secretion, the dimeric LAP-TGF-β1 propeptide is cleaved resulting in a biologically inactive form of dimeric TGF-β1 that is noncovalently associated with dimeric LAP (latent TGF-β1). This complex may be expressed on the surface of TGF-β1-producing cells or be further processed by proteolytic removal of LAP to release the biologically active mature form of the soluble TGF-β1 homodimer. Many different cell types synthesize TGF-β1 and express specific receptors for it. The TW4-9E7 antibody recognizes both the intracellular latent bound form of TGF-β1 along with the membrane bound form of TGF-β1.

Flow cytometric analysis of human TGF-β1 expressed by TGF-β1-transfected P3UI cells. Left Panel: Untransfected mouse P3UI myeloma cells (shaded histogram) and human TGF-β1-transfected P3UI cells (open histogram) were surface stained with PE Mouse anti-Human TGF-β1 antibody (Cat. No. 562339) using BD Pharmingen™ Stain Buffer (FBS) (Cat. No. 554656). Right Panel: Untransfected (shaded histogram) and Human TGF-β1 transfected (open histogram) P3UI cells were fixed and permeabilized for 30 minutes with BD Cytotoxic/Cytoperm™ Fixation and Permeabilization Solution (Cat. No. 554722), washed with BD Perm/Wash™ Perm/Wash Buffer (Cat. No. 554723), and then stained with PE Mouse Anti-Human TGF-β1 (Cat. No. 562339). Flow cytometric fluorescence histograms were derived from gated events with the forward- and side light scattering characteristics of intact cells. Flow cytometry was performed using a BD™ LSR II Flow Cytometer System.

Preparation and Storage

Store undiluted at 4°C and protected from prolonged exposure to light. Do not freeze.

The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography. The antibody was conjugated with R-PE under optimum conditions, and unconjugated antibody and free PE were removed.

#### Product Notices

1. This reagent has been pre-diluted for use at the recommended Volume per Test. We typically use $1 \times 10^6$ cells in a 100-µl experimental sample (a test).
2. An isotype control should be used at the same concentration as the antibody of interest.
3. For fluorochrome spectra and suitable instrument settings, please refer to our Fluorochrome Web Page at www.bdbiosciences.com/colors.
5. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing.
6. Source of all serum proteins is from USDA inspected abattoirs located in the United States.
