Technical Data Sheet

Purified Mouse Anti-β-Arrestin

Product Information

Material Number: 610550
Size: 50 µg
Concentration: 250 µg/ml
Clone: 10/Beta-Arrestin1
Immunogen: Rat β-Arrestin1 aa. 262-409
Isotype: Mouse IgG1
Reactivity: QC Testing: Mouse
Tested in Development: Human, Rat
Target MW: 55 kDa
Storage Buffer: Aqueous buffered solution containing BSA, glycerol, and ≤0.09% sodium azide.

Description

β-Arrestins were discovered due to their ability to modulate interactions between the phosphorylated β2-Adrenergic receptors and G proteins. This modulation results in diminished β2-Adrenergic receptor function, also known as desensitization. Because arrestins are found at the synaptic terminals, they may provide a termination mechanism that allows the neurons to regain their original polarization and respond to a new neurotransmitter stimulus. The C-terminal region of arrestins is involved in selecting the phosphorylated and activated adrenergic receptors. The β-Arrestin1 gene encodes a protein of 418 amino acids with an approximate molecular weight of 55kDa. β-Arrestin1 protein is highly homologous to the 45kDa β-Arrestin2. Both proteins are widely expressed, but are especially abundant in the central nervous system.

This antibody is routinely tested by western blot analysis. Other applications were tested at BD Biosciences Pharmingen during antibody development only or reported in the literature.

Preparation and Storage

The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography. Store undiluted at -20° C.

Product Notices

1. Since applications vary, each investigator should titrate the reagent to obtain optimal results.
3. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing.
4. Source of all serum proteins is from USDA inspected abattoirs located in the United States.
