Technical Data Sheet

Purified Mouse Anti-GPI-Phospholipase D

Product Information

Material Number: 610810
Size: 50 µg
Concentration: 250 µg/ml
Clone: 15/GPI-Phospholipase D
Immunogen: Human GPI-Phospholipase D aa.706-841
Isotype: Mouse IgG1
Reactivity: QC Testing: Human
Target MW: 110 kDa
Storage Buffer: Aqueous buffered solution containing BSA, glycerol, and ≤0.09% sodium azide.

Description

Glycosylphosphatidylinositol (GPI)-anchored proteins are involved in the regulation of numerous cell-surface activities including the complement cascade, activation of plasminogen, T-cell activation, cell-to-cell adhesion, and macromolecule transport through the membrane. GPI-containing proteins are very abundant at the caveolae. GPI-specific phospholipase D (GPI-PLD) hydrolyzes the covalently bound GPI moiety which functions as an anchor for many cell-surface proteins. Present at high levels in the plasma, GPI-PLD is also secreted by some cell types in culture. This protein releases the GPI-anchored, complement regulatory protein decay accelerating factor (DAF) from HeLa cells, as well as the basic fibroblast growth factor (bFGF)-bound heparin sulfate proteoglycan from bone marrow stromal cells. GPI-PLD contains Ca²⁺ and Zn²⁺ binding sites and bears some further structural and perhaps functional similarities to the integrins.

Western blot analysis of GPI-Phospholipase D on human plasma lysate. Lane 1: 1:250, lane 2: 1:500, lane 3: 1:1000 dilution of anti-GPI-Phospholipase D.

Immunofluorescent staining of WI-38 cells.

Preparation and Storage

The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography. Store undiluted at -20°C.

Application Notes

Application | Routine Tested | Immunofluorescence | Tested During Development | Immunoprecipitation | Not Recommended | Immunohistochemistry | Not Recommended

Product Notices
1. Since applications vary, each investigator should titrate the reagent to obtain optimal results.
3. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing.
4. Source of all serum proteins is from USDA inspected abattoirs located in the United States.
