Technical Data Sheet

Purified Mouse Anti-DARPP-32

Product Information

Material Number: 611520
Size: 50 µg
Concentration: 250 µg/ml
Clone: 15/DARPP-32
Immunogen: Human DARPP-32 aa. 70-181
Isotype: Mouse IgG1
Reactivity: QC Testing: Rat
Tested in Development: Mouse
Target MW: 32 kDa
Storage Buffer: Aqueous buffered solution containing BSA, glycerol, and ≤0.09% sodium azide.

Description

Dopaminergic signaling in midbrain neurons is essential to multiple brain functions and involves the activation of dopamine receptors, such as D1 and D2, which regulate the phosphorylation state of DARPP-32 (dopamine and cyclic AMP-regulated phospho-protein of Mr = 32,000). D1 receptor ligation causes activation of PKA and phosphorylation of DARPP-32 at Thr-34, which converts DARPP-32 to a potent inhibitor of protein phosphatase 1 (PP1). In addition, DARPP-32 is converted to an inhibitor of PKA via phosphorylation at Thr-75 by cyclin-dependent kinase 5 (Cdk5). D2 receptor ligation inhibits PKA and activates protein phosphatase 2B/calcineurin causing dephosphorylation of DARPP-32. The major function of DARPP-32 may be to inhibit the activity of PP1, which controls the phosphorylation state of neurotransmitter receptors, ion channels, ion pumps, and transcription factors. DARPP-32-/- mice are defective in the physiological and behavioral responses to dopamine. Thus, DARPP-32, a bifunctional signal transduction molecule that differentially controls a Ser/Thr kinase and a Ser/Thr phosphatase, is a critical element of dopaminergic neurotransmission and normal brain function.

Western blot analysis of DARPP-32 on rat brain lysate.

Preparation and Storage

The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography. Store undiluted at -20°C.

Product Notices

1. Since applications vary, each investigator should titrate the reagent to obtain optimal results.
3. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing.
