Technical Data Sheet

PE Mouse Anti- Stat6 (pY641)

Product Information

Material Number: 612701
Alternate Name: Signal transducer and activator of transcription 6; IL-4 Stat
Size: 50 Tests
Vol. per Test: 20 µl
Clone: 18/P-Stat6
Immunogen: Phosphorylated Human Stat6 (pY641)
Isotype: Mouse IgG2a
Reactivity: QC Testing: Human
Storage Buffer: Aqueous buffered solution containing BSA and ≤0.09% sodium azide.

Description

Interleukin-4 (IL-4), a major immunoregulatory cytokine, is secreted by activated T lymphocytes, basophils, and mast cells and plays an important role in modulating T helper cell lineage development. It induces specific gene expression via the tyrosine phosphorylation of Stat6 at tyrosine 641 (Y641). Stat6, a member of the signal transducers and activators of transcription protein family, mediates signals for IL-4 and, possibly, IL-13. While Stat6 is widely expressed in human tissues, it exhibits elevated expression in peripheral blood lymphocytes, colon, intestine, ovary, prostate, thymus, spleen, kidney, liver, lung, and placenta. Following cytokine receptor ligation, Jak kinases are activated and phosphorylate the cytoplasmic tails of the oligomerized receptors. The SH3:SH2 domain of Stat6 associates with tyrosine-phosphorylated IL-4 receptor and the proximal Jak kinase phosphorylates Stat6 at Y641 on the C-terminal side of the SH3 domain. Stat6 is then released from the receptor, dimerizes, and is thought to contact the basal transcription machinery by binding to p300/CBP. Thus, Stat6 mediates the IL-4 signal and is essential for the proper development of adaptive immunity.

Flow cytometric analysis of phospho-Stat6 (Y641). Human endothelial cells were starved overnight in DMEM containing 0.1% FBS. The following day, cells were either left unstimulated (unshaded) or stimulated (shaded) with human IL-4 recombinant protein (Cat. No. 554605) at 10 ng/ml for 60 minutes at 37°C. Cells were fixed using BD Phosflow™ Fix buffer I (Cat. No. 557870; 10 minutes at 37°C) and then permeabilized using BD Phosflow™ Perm Buffer III (Cat. No. 558050; 30 minutes on ice or overnight at -20°C). Cells were then washed twice in BD Pharmingen™ Stain Buffer (Cat. No. 554656) and stained with PE Mouse Anti- Stat6 (pY641) (Cat. No. 612701).

Preparation and Storage

Store undiluted at 4°C and protected from prolonged exposure to light. Do not freeze.

The antibody was purified from tissue culture supernatant or ascites by affinity chromatography.

Application Notes

Application

Intracellular staining (flow cytometry) Routinely Tested

Product Notices

1. This reagent has been pre-diluted for use at the recommended Volume per Test. We typically use $1 \times 10^6$ cells in a 100-µl experimental sample (a test).
3. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing.
4. Source of all serum proteins is from USDA inspected abattoirs located in the United States.
5. For fluorochrome spectra and suitable instrument settings, please refer to our Multicolor Flow Cytometry web page at www.bdbiosciences.com/colors.
