Technical Data Sheet

Purified Mouse IgG1 κ Isotype Control

Product Information

Material Number: 554121
Size: 0.1 mg
Concentration: 0.5 mg/ml
Clone: MOPC-21
Isotype: Mouse IgG1, κ
Storage Buffer: Aqueous buffered solution containing ≤0.09% sodium azide.

Description

The MOPC-21 immunoglobulin is a mouse myeloma protein. The MOPC-21 immunoglobulin was selected as an isotype control following screening for low background on a variety of mouse and human tissues.

Preparation and Storage

Store undiluted at 4°C.

The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography.

Application Notes

Recommended Assay Procedure:

Clone MOPC-21 is recommended for flow cytometric analysis. It is useful as a mouse IgG1 isotype-matched negative control for this application when used at the same concentration as the antibody of interest.

Product Notices

1. Since applications vary, each investigator should titrate the reagent to obtain optimal results.
2. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing.
3. An isotype control should be used at the same concentration as the antibody of interest.
