Technical Data Sheet

Alexa Fluor® 647 Mouse anti-β-Tubulin, Class III

Product Information

Material Number: 560394
Alternate Name: tubulin, beta 3; MC1R; TUBB3; TUBB4; tubulin, beta-4
Size: 50 tests
Vol. per Test: 20 µl
Clone: TUJ1
Immunogen: Rat brain microtubules
Isotype: Mouse IgG2a
Reactivity: QC Testing: Human
Reported Reactivity: Rat
Storage Buffer: Aqueous buffered solution containing BSA, protein stabilizer, and ≤0.09% sodium azide.

Description

Microtubules are formed by the self assembly of tubulin and are one of the major components of the eukaryotic cytoskeleton. The two main tubulin isoforms, α- and β-tubulin, are usually products of separate genes. The β-tubulin family includes six expressed genes that produce the polypeptide isoforms known as Classes I through VI, each of which have a distinct pattern of expression. Class III β-tubulin is found in neurons and mammalian testis cells and is widely used as a neuronal marker in developmental neurobiology, neoplasia, and stem cell research. Class III β-tubulin expression in neuronal and neuroblastic tumors is differentiation dependent, and its expression in certain non-neuronal neoplasms has been associated with poor prognosis and/or resistance to chemotherapy.

Analysis of Alexa Fluor® 647 Anti-Human Class III tubulin on Neurons. H9 human embryonic stem (ES) cells (WiCell, Madison, WI) were differentiated into Neural Precursor cells (NPCs) and grown for 4 passages before differentiating into neurons and glia for 12 days. The cells were fixed with BD Cytofix™ Fixation Buffer (Cat. No. 554655) for 20 minutes at room temperature, permeabilized with BD Phosflow™ Perm/Wash Buffer I (Cat. No. 557885), and then stained with either Alexa Fluor® 647 Mouse anti-β-Tubulin, Class III (Cat. No 560394; Right Histogram) or Alexa Fluor® 647 Mouse IgG2a Isotype Control (Cat. No. 558053; Left Histogram). This antibody also works with BD Phosflow™ Perm Buffer II and III. Flow cytometry was performed on a BD FACSCanto™ II flow cytometry system.

Preparation and Storage

Store undiluted at 4°C and protected from prolonged exposure to light. Do not freeze.
The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography.
The antibody was conjugated to Alexa Fluor® 647 under optimum conditions, and unreacted Alexa Fluor® 647 was removed.

Application Notes

Application

Intracellular staining (flow cytometry) Routinely Tested
Bioimaging Routinely Tested

Product Notices

2. This reagent has been pre-diluted for use at the recommended Volume per Test. We typically use $1 \times 10^6$ cells in a 100-µl experimental sample (a test).
3. Alexa Fluor® 647 fluorochrome emission is collected at the same instrument settings as for allophycocyanin (APC).
4. Alexa Fluor® is a registered trademark of Molecular Probes, Inc., Eugene, OR.
5. The Alexa Fluor®, Pacific Blue™, and Cascade Blue® dye antibody conjugates in this product are sold under license from Molecular Probes, Inc. for research use only, excluding use in combination with microarrays, or as analyte specific reagents. The Alexa Fluor® dyes (except for Alexa Fluor® 430), Pacific Blue™ dye, and Cascade Blue® dye are covered by pending and issued patents.
6. For fluorochrome spectra and suitable instrument settings, please refer to our Multicolor Flow Cytometry web page at www.bdbiosciences.com/colors.
7. Source of all serum proteins is from USDA inspected abattoirs located in the United States.
8. Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing.
9. An isotype control should be used at the same concentration as the antibody of interest.
10. This reagent has been pre-diluted for use at the recommended Volume per Test when following the Recommended Assay Procedure. A Test is typically ~10,000 cells cultured in a well of a 96-well imaging plate.
